

Innovative Web Application Development & Consulting

For the functionality you need, the quality you desire, the security you can't be without.. look to WEBAPPZ.

INNOVATION BY DESIGN

WEBAPPZ Systems, Inc. (WEBAPPZ) is a privately held software development company providing consulting services and offering technical solutions and support to a wide range of industries, since 1994. Our core business is developing web-based business applications that encompass security, functionallity, user-friendly interface, scalability, low maintenance, and ease of integration. To accomplish this, we ensure strong object oriented principles in our programming and incorporate our own set of tested development frameworks to accelerate the software development process and ultimately provide reliable enterprise class solutions for our end customers, in substantially less time than our competitors.

At WEBAPPZ, our goal is to design great software. We deliver innovative, quality solutions to assist organizations with achieving their business objectives. Companies who work with us see the results in improved operations, better partner and customer relationships, and expanded market reach.

View WEBAPPZ's product matrix below:

The ultimate solution to time, expense, billing, payment, and project management for the professional services industry. Get automated time entry, easy expense tracking, professional billing, simplified payment handling, detailed reporting, project management, and more. See www.1TRACKER.com.

The logo for 1TRACKER features a large red "1" followed by the word "TRACKER" in blue, with a white checkmark above the "R".

1TRACKER

**Web Driven Time,
Expense, Billing, Payment,
and Project Management**

The logo for bizDAV features the word "biz" in red and "DAV" in blue, with a blue underline beneath "DAV".

≡bizDAV

**Distributed Authorization and
Validation for Multiple
Businesses and Web Applications**

PDFkit
framework

**Java API to
Generate Web Delivered
PDF Reports**

The logo for LISTedit framework features the word "LISTedit" in red and blue, with "framework" in blue below it.

LISTedit
framework

**Java API to
Generate Graphical User
Interfaces for Web Applications**

Our own Java-based API to support server-side generation of printable documents according to Adobe's® Portable Document Format (PDF). See www.WEBAPPZ.com/products/PDFkit.html.

A powerful e-business security application to manage users, groups, and businesses and their access privileges to various e-business applications, through licenses and functions. Incorporates firewall technology, audit logging, its own security model, and personal preferences for formats and layouts. See www.WEBAPPZ.com/products/bizDAV.html.

A comprehensive enabler for rapidly developing enterprise-class WebObjects™ applications. This tool reduces the development time of database-driven web applications, and ensures a consistent and powerful graphical user interface (GUI). See www.WEBAPPZ.com/products/LISTedit.html.

Services

At WEBAPPZ, we like to take an innovative approach when it comes to creating better and faster ways to building applications. Our goal is to deliver information-driven web-based solutions, with three things in mind - security, functionality, and quality. Our applications incorporate advanced security features in order to harness the power of the internet, but prevent unauthorized application access. Functionality is key to any application - we design our applications with the end-users in mind. Quality is what differentiates us from the rest - standardized application frameworks provide consistent user interface, and sophisticated back-end data modeling allows us to accommodate virtually any client customization. All of this results in saving time and money for our clients.

We assist companies that are looking for new ways to address their business objectives, whether it be increasing corporate data security, improving workflow operations, facilitating corporate communication, time and personnel management, or expanding market reach.

Our company's success is dependent on our client's success, so we work extra hard to ensure that the end solution meets the client's needs. Delivering high quality internet applications and providing our clients with exceptional service is our strategy for continued company growth and building long-lasting client relationships. WEBAPPZ is your ideal information technology partner - providing consulting, training, and support services. We will work closely with you to understand your company objectives and design a solution that fits your requirements, timeline, and budget. From the discovery phase to deployment, we make every effort to establish open communication with our clients, to meet project milestones, and ultimately, to deliver a quality solution that works for your business.

Our solutions are intuitive by design, easy to use, low maintenance, and easily scalable, but we don't stop there... WEBAPPZ's consistent graphical user interface, advanced security measures and professional PDF reporting are now available features that can be included in any client application. If your company is planning any upcoming IT projects, why not let WEBAPPZ assist you to explore the possibilities, to map the opportunities of currently available IT products, and to provide your business with an innovative solution.

Background

Consulting Background and Experience

- J2EE/WebObjects™ consulting and application development
- Sophisticated Web Delivered PDF Reports
- Web-enabled database modeling and management
- Business systems/process analysis and design
- Financial planning applications
- Object-oriented software development
- Mac OS X Administration
- Systems and Product training
- Visual interactive simulations
- Systems Maintenance and Support
- Multimedia content management systems

WEBAPPZ provides J2EE - Java and WebObjects™ consulting services for any business wishing to use the power of the internet to achieve business objectives.

WEBAPPZ's preferred application development platform for creating enterprise-class web-based solutions that are truly flexible in architecture and easily scalable by design is Apple's WebObjects™. This server-side product enables us to develop and deploy industrial strength applications in weeks rather than months and our applications can be deployed to virtually any J2EE-capable server.

Our own software development frameworks, LISTedit framework, PDFkit framework, and latest products, bizDAV and 1TRACKER, are all based upon the J2EE/WebObjects™ platform.

Whether your company is wishing to take advantage of this development platform for deploying a web-based application or has an existing WebObjects™ application, WEBAPPZ could be your ideal partner. We have the business acumen and software design and development expertise to take your company to the next level.
